My Portfolio

My Website
GitHub: remolg
LinkedIn: remolg

As a Frontend Developer, I gained in-depth knowledge in Javascript and React through the training I received at Acunmedya Academy. I continually enhanced my coding skills through Github projects and maintained my ability to quickly adapt to new technologies.

My belief in teamwork and strong communication skills contribute to the successful completion of projects. My dedicated approach to creating aesthetic and user-friendly interfaces, prioritizing user experience, sets me apart as a Frontend Developer. The education I received at Acunmedya Academy strengthens my technical skills, and my mastery of current industry trends allows me to consistently deliver the best and most innovative solutions in every project.

SKILLS

Tools and Languages HTML/CSS, Javascript, ReactJs, Redux, Material UI, Git, Github
Communication Turkish (Native), English (B1)

PROJECT SUMMARY

Youtube Clone	Recat	Modern React-based YouTube clone offers fresh UI, instant video recommendations.
Disney Plus Clone	React	React and firebase supported Disney+ clone with nice interface.
Portfolio	React	A simple and nice website where I share my projects.

PROJECTS

Project 1 - Youtube Clone

The modern Youtube Clone Application is a carefully made React-based web platform that instantly puts the desired or recommended videos in front of you with a more up-to-date user interface than youtube.

Features

- Responsive Design: Optimized for various devices, ensuring accessibility and usability on both desktop and mobile
- User-Friendly Interface: It provides a flawless user interface made with Material UI
- Youtube Database: I used the RAPIDAPI to fetch videos Youtube v3

Project 2 - Disney Plus Clone

This project integrates Firebase for secure authentication, real-time database, and user authentication, alongside Redux for state management and Styled Components for enhanced visual appeal. Key functionalities include secure Firebase login, user access control, and fetching pre-added movies.

Features

- Firebase: Utilized for secure authentication, real-time database functionality, and user access management.
- Redux: Chosen for centralized application state management and sharing.
- Styled Components: Employed for improved visual aesthetics by enabling component-based styling and management.

Project 3 - Portfolio

My portfolio project provides a comprehensive insight into my skills and achievements in software development. Featuring a responsive design for seamless accessibility across diverse devices, it utilizes "EmailJs" for instant email communication, allowing visitors to easily connect with me.

Features

- Responsive Design: Achieved through media queries and flexible layouts, ensuring optimal user experience on desktop and mobile devices.
- EmailJs: Integrated to facilitate instant email communication, streamlining the process for visitors to reach out directly through the portfolio.
