Sadık Ahmet Özdemir
My Portfolio

Hello! I am Sadık Ahmet Özdemir, a dedicated individual with a strong passion for Front-End development. I successfully completed an intensive 8-month training program at AcunMedya Academy, where I honed my skills in the field of Front-End development. Throughout my training, I acquired comprehensive knowledge in the foundational elements of the web development world, including HTML, CSS, and JavaScript. However, what truly excites me is designing user interfaces that can provide users with impressive and effective experiences by utilizing these foundational skills. Although I may not have had professional experience in the past, I feel confident in my knowledge and abilities thanks to the rigorous training program at AcunMedya Academy. Now, I am eager to apply this knowledge to real-world projects and continue learning always.

SKILLS

Tools and Languages	HTML/CSS, Javascript, ReactJs, Redux, Material UI,
Communication	Turkish, English

PROJECT SUMMARY

Youtube Clone	Recat	Modern React-based YouTube clone offers fresh UI, instant video recommendations.
Tic Tac Toe	React	A basic XOX game created with HTML5, CSS, JavaScript, and React
Telephone Directory	Javascript	A phonebook where you can save names and numbers.

PROJECTS

Project 1 - Youtube Clone
The modern Youtube Clone Application is a carefully made React-based web platform that instantly puts the desired or recommended videos in front of you with a more up-to-date user interface than youtube.

Features
- Responsive Design: Optimized for various devices, ensuring accessibility and usability on both desktop and mobile
- User-Friendly Interface: It provides a flawless user interface made with Material UI
- Youtube Database: I used the RAPIDAPI to fetch videos Youtube v3

Project 2 - Tic Tac Toe
This project is a simple XOX game made using HTML5, CSS, JavaScript and React. The game can be played in your browser.

Features
- Responsive Design: Optimized for various devices, ensuring accessibility and usability on both desktop and mobile

Project 3 - Telephone Directory
This project is something I made to reinforce what I learned while learning JavaScript.

Features
- Responsive Design: Optimized for various devices, ensuring accessibility and usability on both desktop and mobile
- You can add a name / phone number.
- To prevent you from making wrong decisions, you will receive ARE YOU SURE messages for every deletion action you make.
- You will receive error messages upon incorrect fillings.
